

Monorail Bearing

Application range

Suitable for a wide range of bridges including truss and girder bridges. Applicable to concrete girder bridges with span lengths up to 25m.

High Quality

- High toughness proven by Charpy impact test
- High performance material used for rollers

High Durability

This bearing is recognized as a standard bearing for alweg monorails in Japan and has an extensive track record.

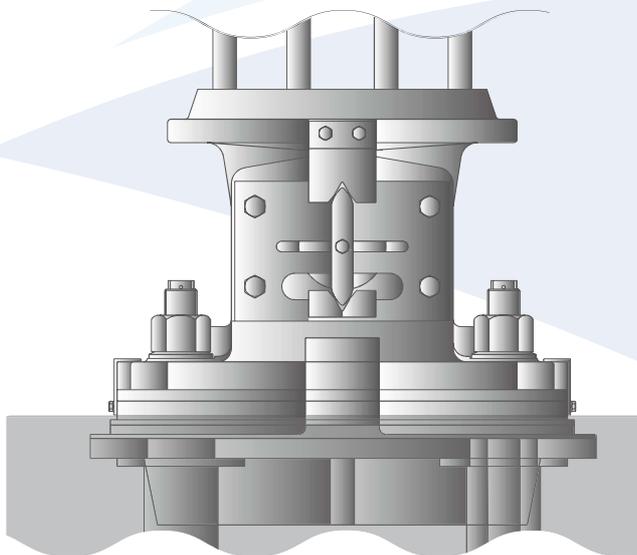

Superior Manufacturing Technology

It is composed of a remarkable number of parts which require high level casting, machining technology, and a rigorous quality assurance system.
